

# One Piece

The Second Part of Lab 04

# The Second Part

- For some reason, the governor asks the drink producers to add an sequential id for each drink it produced, and the product's description need to be changed to something like "Cola, id:1"
- You need to
  - Modify the "itShouldReturnCorrectDrinkDescription" test case to make sure you return the correct product description (<NAME>, id:<id>)
  - Add a new integer field to the Drink class to store the id
  - In the Drink constructor method, generate the new id for the new drink
    - *hint: the static variable may be helpful to generate the sequential id*
  - Modify the toString method to present the correct description

# The Second Part

- Notice that
  - You cannot modify the interface
  - You can only modify one test case (the description one)
  - Every test case should pass correctly
    - You might need to modify some code in the Drink class to pass all tests
